

# Solar Stakes™

Keeping Panels Upright!

## Installation Instructions

### Contents:

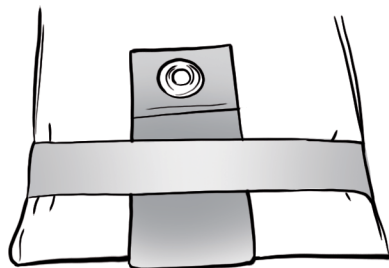

2x Straps  
2x Stakes  
Reclosable Pouch

### Step 1:

Extend the elastic strap over the Panel Kickstand ensuring Hook/Loop fasteners complement those on the kickstand (if present). Repeat for each kickstand.

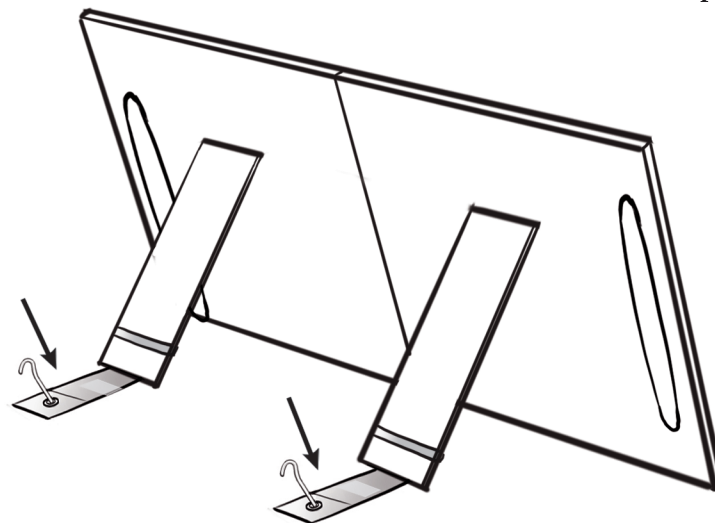

### Step 2:

Place the Solar Panel facing the Sun. Extend the strap attached to the Kickstand. Push the stake through the grommet/eyelet at an angle to secure the panel. Alternatively, if driving stakes in the ground is untenable, place a heavy object on the strap to anchor the panel.

### Storage:

Fold the flap inside the elastic strap, as shown (right), for convenient storage when the panel is not in use.
