

Product Overview

Solar Stakes™ (**patent pending: 63/455,096**) are thoughtfully designed as an add-on to Portable Solar Panels with kickstand legs. The product idea was born out of frustration of wind toppled Solar Panels when camping outdoors. It is very deflating to return to a campsite in the evening and find solar panels face down on the ground and a discharged Portable Power Station. **Compatibility:** Panels with Kickstand Leg Width 5" - 7.5".

Product Packaging

Solar Stakes™ are packaged with 2 straps and stakes each for a typical 100W Portable Solar Panel with 2 kickstands. The straps are designed with rugged UV resistant material and stitching to withstand the rigors of outdoors.

Product Installation

Solar Stakes™ are purposefully designed with Velcro Hooks and Loops for non-invasive installation on Solar Panel kickstand legs. Once installed, Solar Stakes™ are designed to be retained on the legs. Rust proof grommet/eyelet and stake guarantee long life.
